

# Diginomics Brownbag 2019

Research Group Diginomics – Digitalization, Economy, and Society

The *Diginomics Research Group* at the University of Bremen examines research questions relating to the digitization of labor, capital, and product markets. Our faculty has defined twelve research focuses, as part of which graduate students jointly investigate with their supervisors economic, moral, and psychological research questions with an emphasis on new digital markets. To investigate these topics, we apply state-of-the-art empirical and experimental methods. The research group conducts basic research and provides policy advice to regional, national, and supranational policy makers. The research focuses deal with questions relating to artificial intelligence, blockchain, chatbots, digital finance, and platform economics.

## Events 3 April – 22 May:

**3 April – 12 pm | Room 4190**

### **Risk Simulations in Online Financial Advice**

(Prof. Dr. Stefan Zeisberger – *University of Zurich and Radboud University*)
