Publishing research papers is one of the key procedures to communicate research and an important part of a scientist’s life. Nevertheless, writing a good paper does not come overnight, it needs knowledge and practice.

In this workshop, you will learn about what is needed to write and publish successfully.

**Topics of the workshop will be:**
- Selecting & organising data
- Introduction to paper sections & structure
- Submitting the finished paper

Many practical exercises and a comprehensive handbook complement the theoretical part on how to prepare a paper. The workshop offers you the possibility to work on your own texts, which includes the analysis, revision and improvement of already written paragraphs. Throughout both workshop days, there will be room for discussion and individual questions. By the end of the workshop, you will be provided with guidelines and tools that will make the writing and publishing process easier.

We offer a refund of expenses for childcare. Attention: The babysitter cannot be a member of the family!
