Universität Bremen

CSL — Cognitive Systems Lab

Student Assistant Position
HateSpeech:
Data Annotation

Project:

Hate speech can be defined as the verbal aggression targeting members of various social groups. The current surge in the use of social media exposes us to numerous instances of hate speech in the platforms, which has some detrimental consequences. Our objective is to understand both, the underlying properties of hate speech, and its impact on listeners. We are looking for students who are interested in annotating audios and texts comprising hate speech.

Primary Task:
- ❑ Identify parts of hate speech in audio and text and annotate the data based on a preset schema

Requirements:
- ❑ Language skills: German and English

Nice to have: Prior data annotation experience

When? As soon as possible!
