

Student Assistant Position

HateSpeech:

Automatic Data Collection

Project:

Hate speech can be defined as the verbal aggression targeting members of various social groups. The current surge in the use of social media exposes us to numerous instances of hate speech in the platforms, which has some detrimental consequences. Our objective is to understand both, the underlying properties of hate speech, and its impact on listeners. We are looking for students who are interested in collecting online hate speech data by means web crawling.

Primary Task:

- Develop and improve web crawlers to collect hate speech from Twitter, YouTube or other social media platforms

Requirements:

- Good knowledge in Python
- Basic understanding of Machine Learning
- Language skills: German and English

Nice to have: Prior experience in data crawling

When? As soon as possible!
