

Online Examinations at the University of Bremen via the LTS3 - Technical and organizational information for students -

A comprehensive and always up-to-date collection of frequently asked questions by students can be found at <https://www.uni-bremen.de/zmml/kompetenzbereiche/e-assessment/pruefungsformen/online-open-book-pruefung/faq-online-lts3-pruefungen>. The FAQ mainly deals with login problems and the solution of technical problems. Therefore, only the most important information is given below:

- Immediately after receiving your login data, test whether you can access <https://online.eassessment.uni-bremen.de> in your browser and log in with the PC / laptop intended for the exam. You can log in as often as you like (but only start the exam once). If you have login problems, check the FAQ.
- Provide a quiet environment conducive to concentration (e.g., post a "do not disturb" note on the door).
- Tablets and cell phones are not suitable for online exams! Laptops should be plugged in during the exam.
- Make sure you have a stable and fast internet connection. If possible, use an Ethernet cable to connect the router and PC. When using WLAN, please ensure that the signal strength is sufficient. If these conditions do not apply to you, look for an alternative workstation if necessary, e.g. with parents or friends.
- Start your PC/laptop in good time (virus scan, update routines) and close all other programs if possible before starting the exam. Deactivate automatic updates (e.g. Windows Updates) and other processes, which load the Internet connection, for the period of the examination.
- For Windows users, we recommend an **current version of Chrome, Edge or Firefox**. Definitely not compatible are an outdated Edge (54.xxx) and Safari for MAC or Windows. MAC users have experienced the fewest problems using Mozilla Firefox.
You can find more information about the browser you are using e.g. at www.whatismybrowser.com (external page). There you will find information about the browser, version and update options.
- **important:** Disable any AD blockers and other extensions that filter website content during the scan. Some AD blockers prevent the display of question texts or cause display errors!
- In case you have to log in again, always have your login data ready during the exam as well. After logging in again, you will be taken directly back to the interrupted exam.
- Use the contact option given to you by your teachers for the exam (zoom link, tel. no., chat, ...).
- Continuing technical problems, e.g. a longer interruption of the internet connection or recurring error messages of the browser, which have caused disadvantages for you during the test, must be documented by you. If possible, take screenshots and inform the person responsible for the test as soon as possible. They will then discuss the next steps with you (e.g., scheduling a retake). During the test, a technical test log is automatically created, which is used in addition to your documentation for the error analysis.

Good luck with your test
